Education

- **Master's in Computer Science**
Federal University of Ceará (UFC)
2026 – In progress
- **Bachelor's in Computer Science**
Federal University of Ceará (UFC)
2022 – 2025

Professional Experience

Software Developer — Fitbank Pagamentos Eletrônicos (Jan/2025 - Jun/2025)

- Worked on the development and maintenance of the bank account management system (individuals/businesses), impacting thousands of users.
- Responsible for implementing CRUD operations, financial data processing, and integrations with payment methods (Pix, TED, and boletos).
- Bug fixing, legacy code refactoring, and development of new features using C# and SQL Server.
- Migration of modules from .NET Framework to .NET 6.
- Participation in code reviews, REST API design, and application of software engineering best practices (SOLID, Clean Architecture).
- Worked in an agile environment (Scrum), using Azure DevOps, Git, and CI/CD pipelines for continuous delivery.

Researcher and Developer — Akiyama (Apr/2026 - Aug/2026)

- Participation in research and development activities in the field of *Liveness Detection*, focusing on *Deep Learning* techniques and improvement of existing liveness detection solutions.
- Development and evaluation of computational models and approaches to enhance security and biometric authentication solutions.
- Development of *Liveness* solutions for mobile devices, using Kotlin and Android ecosystem technologies.
- Implementation of experiments, data processing and analysis using Python, with application of deep learning and computer vision techniques.
- Research and development of new approaches aimed at optimizing performance, accuracy, and computational efficiency of current solutions.
- Participation in the analysis, prototyping, and validation of research solutions, integrating concepts of *Deep Learning*, computer vision, and software development.

Projects

Iustitia — Legal Management SaaS with AI (2026 – Present)

- B2B SaaS for law firms, centralizing case tracking, publications, and deadlines, with automation of legal workflows.
- Integrated AI assistant (Athena) with mandatory human review on all actions and validations, keeping the lawyer in control.
- Event-driven architecture with asynchronous messaging via MassTransit over Azure Service Bus, and background task processing with Hangfire.
- Multi-tenant architecture with data isolation via PostgreSQL Row-Level Security (RLS).

- Architecture and patterns: Modular Monolith, Clean Architecture, Vertical Slice Architecture, tactical DDD, pragmatic CQRS, Transactional Outbox, and Result Pattern.
- Observability with OpenTelemetry; resilience of external calls with Polly.
- Stack: .NET 10, C# 14, ASP.NET Core, MediatR, Entity Framework Core 10, PostgreSQL/Supabase, React 19, TypeScript, Swift/SwiftUI, Azure, MassTransit, Hangfire, Polly, and OpenTelemetry.

FileSharing — File Sharing Platform (2026)

- File sharing platform inspired by services such as WeTransfer, with generation of access links and controlled file lifecycle.
- Backend developed in ASP.NET Core/.NET 10, following Clean Architecture and separation between domain, application, infrastructure, and presentation.
- Direct upload to Amazon S3 enabling greater efficiency in the storage flow.
- Real-time communication with SignalR for event notifications, including download tracking.
- Mobile application developed with .NET MAUI/Android, integrated with the upload flow and file and folder selection.
- Support for individual files and folders, with directory compression for storage and automatic expiration of shares after the defined period.
- Automated tests and integration tests with LocalStack for validation of AWS S3-compatible storage flows.
- Infrastructure prepared for execution on AWS, with ECS Fargate and storage services decoupled from the application.

SIGIS — Integrated Health Management and Information System (2026)

- Developed individually in a 20-hour hackathon (Banco do Nordeste, UFC, and Crateús City Hall), team Last Soldier — 4th place.
- Care management platform for people with ASD in the municipal public network, unifying registration, service queue, and history across five services (NASF, CREAES, NAPE, Casa Mais Azul, and CRASF).
- Patient deduplication in three layers (CNS, CPF, and name similarity), always with human review; federated timeline across Health, Education, and Social Assistance.
- Access control and data sharing with LGPD by design: visibility levels, granular consent by purpose, and prior auditing before access between departments.
- Technologies: Flutter/Dart (mobile), ASP.NET Core/.NET (backend), PostgreSQL.

Technical Skills

- **Stack:** C#, .NET Core/.NET 6+, ASP.NET Core Web API, Angular, React, Java, Go, JavaScript/TypeScript
- **Architecture & Messaging:** DDD, CQRS, Clean Architecture, Vertical Slice Architecture, REST, event-driven architecture and asynchronous messaging (Azure Service Bus, MassTransit)
- **Cloud & DevOps:** Azure (DevOps, CI/CD Pipelines, Functions), AWS (ECS Fargate), Git
- **Databases:** SQL Server, PostgreSQL, MySQL, Redis
- **Software Engineering:** SOLID, Clean Code, TDD, observability (OpenTelemetry)
- **English:** B2 level — technical reading and writing of documentation

Certifications

- Balta.io — C# and ASP.NET (2024)
- Azure Fundamentals (AZ-900) — in progress
- Full Cycle — Software Architecture (2025)
